

Pruebas Tercera Iteración

En todas las pruebas se prueba el login ya que es necesario estar logeado para navegar a través de la página.

Por ser administrador el usuario, se va a la administración de productos y se prueba que se pueda borrar un producto.

```
mario@HP-PC:~/Documents/Universidad/Inge1/PatoFINAL/psychopato-2$ bin/behat features/terceraIt.feature
@javascript
Feature: User Login delete product and logout
  In order to delete a product
  As a administrator
  I need to be able to login and get redirected to the main page, then go to Administración de productos, delete a product and then logout

  Scenario: Going to login administration page                                # features/terceraIt.feature:7
    ^C    Given I am on "/"                                                  # FeatureContext:
    visit()                                                                    # FeatureContext::c
    And I follow "Iniciar sesión"                                           # FeatureContext::c
    clickLink()                                                                # FeatureContext::a
    Then I should see "Acceder a la cuenta"                                 # FeatureContext::f
    assertPageContainsText()                                                  # FeatureContext::f
    When I fill in "Nombre de usuario o correo" with "admin"               # FeatureContext::p
    fillField()                                                                # FeatureContext::p
    When I fill in "Contraseña" with "spooks"                               # FeatureContext::p
    fillField()                                                                # FeatureContext::p
    And I press "Acceder"                                                    # FeatureContext::a
    pressButton()                                                             # FeatureContext::a
    Then I should see "Cerrar sesión"                                       # FeatureContext::c
    assertPageContainsText()                                                  # FeatureContext::c
    And I follow "Administración de productos"                              # FeatureContext::a
    clickLink()                                                                # FeatureContext::a
    Then I should see "Añadir producto"                                     # FeatureContext::c
    assertPageContainsText()                                                  # FeatureContext::c
    And I follow "BORRAR PRODUCTO"                                          # FeatureContext::p
    clickLink()                                                                # FeatureContext::p
    And I press "Borrar producto"                                           # FeatureContext::a
    pressButton()                                                             # FeatureContext::a
    Then I should see "DATOS GENERALES"                                     # FeatureContext::a
    assertPageContainsText()

Como se puede ver, solo la última prueba falló ya que el producto que se trató de eliminar, ya había sido eliminado por las pruebas anteriores. Las pruebas de las demás iteraciones siguen funcionando (al correr *bin/behat features* sin un archivo específico, selenium prueba todos los casos.)

Posteriormente se incorporó la prueba de la búsqueda. Si busco un producto, debería aparecerme dicho producto y la opcion de añadir al carrito si existe.
